The Hiring Manager
AOMS Technologies Inc.
Toronto, ON

**Re: IoT Product Developer
Greetings Hiring Manager:**

I am writing to reply to this IoT Product Developer position that I found on indeed. And I believe I'm a pretty decent fit for the job.

I'm an Electrical Engineering graduate from York University. My time as a research assistant has made a jack-of-all-trades kind of player. I have done a few IoT related project with ESP32, ESP8266, nRF52832 modules details can be seen in my resume. I enjoy writing GUI. I have written user interface for testing purpose with PyQt, and planning to learn Qt in C++. I assembled a PCB designed by myself which was later used as a chip test platform. And of course I can use most of the electronics lab instruments. I'm can also do motion and thermal analysis with NX. I consider myself having a pretty solid Solidworks modelling skill as well. As a self-motivative individual, I can multitask like an OS scheduler.

As I see it, I can be of great use to your company. And for me it will be a great honor to experience the IoT revolution alongside of your company as well.

Yours sincerely,

Owen Qiao
